DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 20-23 and 25-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawamura (USP 5371553).

Regarding claims 20, 22, 25 and 27, Kawamura discloses (Figs 1-19 and col. 3, lines 35 to col. 19, lines 4) a system and method for a plurality of information apparatuses (Fig 5), comprising acquiring index information associated with processes which can be executed on each of the information apparatuses connected to a network to transmit information among them (col. 5, lines 35-55, the monitor transmits a command to the audio video units to retrieve the menus for displaying on the monitor), through said network, the index information being stored in each of said plurality of information apparatuses through said network and relating data held in said information apparatuses (col. 5, lines 43-44, the audio visual units stored menu information); presenting the index information acquired in the step of acquiring the index information; and when given data and a given process are linked together on the basis of the index information presented in the step of presenting the index information, transmitting the given data from one of the information apparatuses which holds the given data to another of the information apparatuses which executes the process linked with the data through said network

Application/Control Number: 09/703,790

Art Unit: 2665

(Fig 16, the monitor transmits a command to a VTR to request a stored data in the VTR; the VTR transmits the stored data to the monitor after receiving a command).

Regarding claims 21, 23, 25 and 28, Kawamura discloses the step of presenting index information presents bitmap and character information included in the index information (Fig 19, Icon and text).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 24 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawamura in view of Fuhrmann (USP 5371553).

Regarding claims 24 and 29, Kawamura discloses (Figs 1-19 and col. 3, lines 35 to col. 19, lines 4) a method and system comprising storing index information in each of said plurality of information apparatuses (col. 5, lines 43-44, the audio visual units stored menu information); acquiring index information associated with processes which can be executed on each of said information apparatuses connected to a network to transmit said index information among said information apparatuses, the index information relating data held in said information apparatuses (col. 5, lines 35-55, the monitor transmits a command to the audio video units to retrieve the menus for displaying on the monitor); presenting the index information acquired in the step of acquiring the index information; when given data and a given process are linked together on the

Application/Control Number: 09/703,790

Art Unit: 2665

basis of the index information presented in the step of presenting the index information, setting connection between the information apparatus holding the data and the information apparatus which executes the process linked with the data; and using the, connection placed in the step of setting the connection to transmit the information data using a packet to said information apparatus which executes the process linked with the information data (Fig 16, the monitor transmits a command to a VTR to request a stored data in the VTR; the VTR transmits the stored data to the monitor after receiving a command wherein the packet used to carry information between the devices and Fig 6). However, Kawamura fails to disclose the information are carried in the payload of a fixed length message. In the same field of endeavor, Fuhrmann discloses the information apparatuses comprising a SAR for receiving and transmitting a fixed length packet via a network (Fig 27, 1034 for interface with VCR, TV).

Since, a method for segmenting a packet into a fixed length packet is well known and expected in the art. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to apply a SAR device into the information apparatuses for conveying the information between them as disclosed by Fuhrmann's system into Kawamura's system. The motivation would have been improve the throughput of the network.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Eisenhandler (USP 5425291) disclose a method and system for communication between the devices on the network.

Art Unit: 2665

Fujita (USP 5500794) discloses a method and system for distributing the control menus on the network.

Florin (USP 5583560) disclose a method and system for audio visual interface for selective display of listing information.
